

## Outbreak of Corona Virus COVID-19

Due to the fact that Corona virus was detected in Slovenia last week we feel obliged to share with you what is situation with our company respectively.

In IMP PUMPS we have started implementing measures to prevent infection several weeks before the virus was detected in Slovenia. The measures we have taken were implemented according to instructions of Ministry of Health with the target to protect our employees and partners.

And indeed protection of our employees and partners is a primarily goal of IMP PUMPS management.

We are continuously instructing our employees of necessary behavior and hygienic protection towards virus. We introduced work from home for all employees that came in contact with crisis affected areas as well as asking people to stay at home if they have any signs of illness. We limited traveling of our employees abroad as well as visits of the company. This is causing less physical connection with our partners but we are intensively using other communication means.

Regarding our operations we would like to point out that IMP PUMPS is working without any kind of break and that we can assure that our deliveries are not jeopardized for the time being. IMP PUMPS and complete supply chain is working normally.

It is very important that all of us intensify our communications and stick together as much as possible in order to go through these difficult times which will not last forever.

We wish you and your families to go through all of this with minimum damage.
